APPROXIMATION THEOREMS OF THE KOROVKIN-TYPE FOR COMPLEX-VALUED FUNCTIONS

123-129

Abstract: In this note, positivity for linear functionals and linear operators on the space $C(X)$ of complex-valued continuous functions is defined by putting a lexicographic order on complex numbers and two theorems for convergence of a sequence of positive absolutely monotone linear functionals (resp. operators) are established. These results extend the well-known theorems of Korovnin.
