ON NON-ARCHIMEDEAN QUASI NORMED SPACES 1-11

Abstract: Non-archimedean quasi normed spaces were introduced independently by K. Iseki and T. Konda in the year 1960. These spaces are generalizations of the non-archimedean normed spaces introduced by a Dutch mathematician A. F. Monna in the early forties. In the subsequent years, a part of the theory of non-archimedean normed spaces has been developed over these new spaces and also over more general spaces but still a large portion remains to be developed. This article is a brief survey of the research done so far in non-archimedean quasi normed spaces.

FIXED POINT THEOREMS IN BANACH SPACES 23-29

Abstract: In this paper some fixed point theorems are proved which extend the theorems of Pai and Veeramani (1982), Rhoades (1977) and Ćirić (1975).
