IN AN ANNULUS UNDER TOROIDAL PRESSURE GRADIENT 87-94

Abstract: Unsteady flow of a viscoelastic fluid in an annulus an arbitrary time varying toroidal pressure gradient has been discussed in this paper. It has been found that unlike viscous fluid in viscoelastic fluid periodic oscillations are set up whose amplitudes decay with time.

GENERALIZED FLEXURE PROBLEMS 101-107

Abstract: Using the linear stress-strain relations proposed by Seth, exact solutions are obtained for the following problems: (1) Generalized flexure of a cuboid (2) Generalized inverse flexure of an initially curved cuboid.
